Abdullah Gul University Sustainable Procurement Policy

At Abdullah Gül University, we place sustainability at the center of all our activities and strive to fulfill our social, environmental, and economic responsibilities. In this context, we are committed to contributing to a more sustainable future by basing our purchasing processes on environmental, social, and governance (ESG) criteria.

Our procurement policy aims to promote environmental sustainability. In this regard, we prioritize reducing carbon emissions, increasing energy efficiency, minimizing waste, and protecting water resources. We also expect our suppliers to take steps to reduce their environmental impact.

Within the scope of social responsibility, AGU adopts a procurement approach that respects human rights and supports fair and safe working environments. We encourage equality and diversity in human resources practices and prioritize compliance with occupational health and safety standards. We also value supporting projects that benefit society and contribute to the local economy.

Our governance principles are based on ethical values and legal compliance. AGU aims to create a transparent, honest, and accountable supply chain. We expect our suppliers to uphold these values, fully comply with legal regulations, and meet the highest standards in data security.

This policy plays a critical role in achieving AGU’s sustainability goals. With the participation of all our suppliers, we aim to create a procurement process that integrates environmental, social, and economic sustainability, and we are committed to continuously improving this process. As AGU, we will continue to take determined steps on our sustainability journey.
