

Reducing of Plastic Use Policy	Document No:	POL-16
	<b>Publishing Date:</b>	17.05.2019
	<b>Revision Date:</b>	20.07.2023
	<b>Revision No:</b>	3

AGU is committed to reducing the amount of plastic products on its campus. It seeks to prevent and mitigate the negative effects of plastic on the environment and human health. As an innovative and awareness-raising institution, we adhere to all quality and improvement principles, place an emphasis on awareness-raising, education, and the environment, and follow a policy to reduce the use of plastics. In this regard, AGU guarantees that sustainability and waste management trainings are held at regular intervals throughout the year in order to develop understanding and consciousness among its personnel, students, and the general public.

In accordance with Regulation No. 27533 on the Landfill of Wastes, AGU shall not directly or indirectly discharge, store, transfer, remove or disposal any kind of waste or residue into the receiving environment or undertake similar activities that may cause damage to the environment. Whenever any contamination occurs, "AGU" implements the precautions required to prevent the contamination and to eliminate or minimise its effects.

In accordance with Environmental Law No. 2872, it complies with the compulsory standards to be applied for the protection of the environment, prevention and elimination of environmental pollution, dissemination of zero waste, implementation of circular economy principles and combating climate change, as compulsory standards and taxes, fees, contributions, promotion of renewable energy sources and clean technologies, promotion of non-motorised or electric vehicles, promotion of waste recovery and reuse of treated wastewater, reduction of the use of plastic-containing bags or packaging. AGU is committed to sustainable and socially responsible service by reducing the use of plastics and adopting recycling and waste management systems.

AGU is committed to reducing the use of plastic items in all its operations and services, not utilizing plastic cups, as well as continuing its efforts to discover positive solutions to decrease unnecessary plastic waste on its campus. In compliance with the **Zero Waste Regulation No. 30829**, it includes all restaurants, cafeterias, and canteens on campus in the practices done within the framework of the Waste Management System it has established and the Zero Waste Certificate it is entitled to earn. One of the practices in this regard is the decrease of plastic

waste. In order to collect recyclable wastes such as plastics, which are among the most common wastes on campus, separate containers for this sort of waste area have been established on campus. The AGU Waste Management Commission undertakes annual monitoring and reporting of plastic consumption in compliance with the Control of Packaging Wastes Regulation No. 38745 and within the context of the AGU Waste Management Directive and Implementation Principles. The aim in this aspect is to reach the target of being a sustainable institution that does not use plastic items among its all operations.

## **Objectives to Reduce Plastic Use**

- 1. To ensure a cleaner, more sustainable campus for life and society's health.
- 2. To develop strong partnerships and teamwork with all stakeholders.
- 3. To educate and enlighten the public on the need to understand their legal and constitutional responsibilities regarding plastic trash management.
- 4. To reduce the supply of plastic commodities by 60%.
- 5. By 2025, the consumption and disposal of plastics will be reduced by 70%.
- 6. To dispose of 70% of garbage by recycling and 30% through landfill management by 2025, while maintaining quality, health, and safety standards.
